

a half mirror 8. At this time, the observation light is split into two directions. The observation light in one direction is directed to the eye-piece barrel 20, and directly observed by the observer 90 via the eyepiece lens 21. The observation light traveling in the other direction is guided to the electronic camera 40 through the television camera adapter 30 attached to a mount on an upper portion of a tri-metroglen barrel 10.
